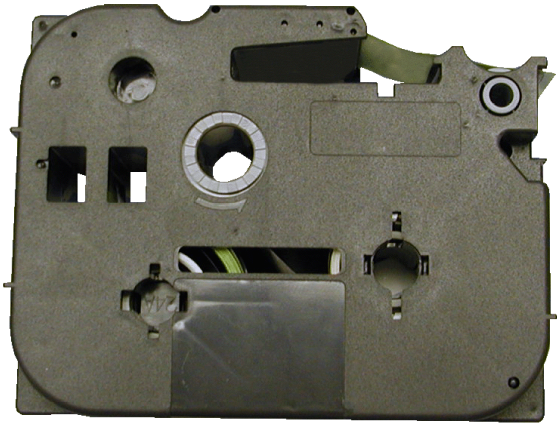
# STENCIL CARTRIDGE

## Electrolytic Etch Marking Systems



Östling is the only electrolytic stencil supplier that has the option of letting the user create their own short-run stencils quickly and easily through the use of our specially designed stencil cartridges. This stencil cartridge, when placed in either the Brother P-touch PT1300 or PT1500PC and printed on, creates a stencil ready for marking. The stencils are typically for short-run batches or for markings that need to change frequently.
